

Restoring Coherence

Using health technologies in a
wellness space

Lisa

www.healthoptimizing.ie

Where to start, the philosophy

- To support the bodies own self healing, self regulating mechanisms. We are not symptom focused, symptoms are often compensations of the problem
- We deal with root (primary and secondary) by looking at
- Underlying causations – genetic factors, tissue pH, oxygenation, toxins, epigenetics, organ functions
- Trigger factors – psychosomatic, stress triggered, microorganisms, toxins
- Aggravating factors – not directly related to why it developed but make the body less able to deal with it
- We can map out 20,000 factors rather than a hospital testing one by one blood tests, blood pressure .. Maybe they map 100 factors, this gives us a far more comprehensive complete picture of the jigsaw
- Treatment – support self healing self regulating, not overwrite them

Wellness space Overview

- The body has lot of functions and systems – cardiovascular, digestive etc
- We need different technologies to map out the different systems and evaluate how they are functioning. The combination of different technologies used together is the key
- How conditions are at a cellular level, how the ions are exchanging over the cell membranes, how the mitochondria can produce energy, what environment the cells are in, cell metabolism, what supply they have including the energetic systems, emotional

ES Complex Screening Device

ES Complex

- Electro-Interstitial Scan (cellular activity in different areas of the body.) Different signals go in and measure different ionic parameters. Calculate what activity is in different segments of the body (plasma environment)
- Phase Angle (membrane capacitance – how cells exchange ions)
- Pulse Oximeter (oxygen charge carriers)
- Digital Pulse Wave (vascular parameters)
- Vascular Elasticity (arterial compliance)
- Electro Cardiograph – electrical stability of the heart
- Heart Rate Variability (autonomic balance)
- Galvanic Skin Response (sympathetic tone)
- EEG (brainwave coherence)
- BioImpedance Test measuring body composition sending in different fields through the metal plates and different fields are absorbed by different muscles and we can calculate body composition from the fat percentage and fluid inside and outside the cells

Barbara Wren, Cellular Awakening

- We are slowed down light creating matter
- Disease is a change in resonance
- 3 big players – fats & oils, calcium, sodium
- Perfect cell is Cell nucleus + inside cell membrane – outside cell membrane + - Fatty acids
- In that Calcium gates allow things in and out. Cell microcosm, how much macrocosm we can bring in.
- 80% oxygen used, 20% glucose is the ATP of perfect cell
- Disease is a moving scale, can end up 20% oxygen, 80% glucose
- We become dehydrated, interrupts the exchange of the electrons causing a change in cell
- Hardening, lowering resonance, fewer electrons, fewer photons available to that cell
- Shows us how much charge of cell membrane changed, cell membrane potential so weak, cannot attract electrolyte to it.
- Charge of planet changes from day to night and so does sodium, calcium moves in cell at day and out at night. This would be interrupted, changing the charge of the cell. Sodium, calcium left inside
- Every stress registered in water component as dehydration (fear and anxiety). Body in survival mode.

Introspect / NLS bioresonance

- Scans the body for toxins, microbes, stress signatures
- Reveals parasitic waveforms that steal charge
- Operates like molecular spectroscopy / Wi-Fi sweep (Non Linear System)
- Measures at level of brain stem, what strain of microorganism or toxin
- Our brains monitor everything in the body with internal cellular communication, we measure remotely at the level of the brainstem
- We scan the carrier wave, reading is external and non-intrusive – like tuning into all radio stations at once by looking at the vibration of the cell membrane and comparing to the database of all known conditions recorded

Introspect / NLS

- Client wears a headset containing inductor sensors (like mini magneto-inductive antennas).
- The device sends extremely weak quantum noise / oscillating fields into the brain & body and reads back the nonlinear response of tissues.
- A low-intensity laser pointer aimed at the forehead helps calibrate the scanner by stimulating a consistent reference point in the pineal/vascular area.
- Each tissue and microorganism has a unique spectral “fingerprint” (like molecular spectroscopy).
- The NLS scans through a library of thousands of reference waveforms and uses a pattern-matching algorithm to see which ones resonate with the returned signal.
- Like hacking into the body’s Wi-Fi — reading the carrier frequency and phase noise of each organ’s field to detect disharmony.
- The output is a probability map of stress in organs and a list of microorganisms / toxins interfering with coherence.

Rife Therapy (MOPA- GB4000)

- Delivers specific resonant frequencies to disrupt microbes and support tissue harmonics.
- Every microorganism has a natural resonance frequency (its molecular bonds vibrate like a tiny tuning fork).
- When exposed to its “Mortal Oscillatory Rate” (MOR), the organism’s membranes destabilise — like a wine glass shattering from a high C note.
- It sweeps scalar / plasma frequencies up and down through the target band.
- This sweeping prevents microbes from “dodging” by slightly shifting their resonance — the sweep still catches them.
- It also broadcasts harmonics, not just one tone, which broadens the kill zone.

Papimi PEMF

- Generates ultrashort, high-intensity pulsed electromagnetic fields ($\sim 30\text{--}40\text{ kV}$ in the coil, but felt as safe nano-volts at the tissue level).
- These pulses induce microcurrents in cells, recharging the sodium–potassium pump of cell membranes.
- It gives a sudden implosive charge that resets cell voltage and jump-starts mitochondrial ATP production.

Medithera MAT

- Generates low-intensity, sinusoidal or sawtooth PEMF across the entire mat.
- Promotes microcirculation, oxygenation, and smooth ion transport across membranes.
- Sustained oscillations that help cells synchronise their rhythms after the Papimi spark.
- One plus one equals 11
- Papimi ignites cell charge, Medithera stabilises and entrains it. Used together, the body shifts from depleted to coherent faster than with either alone.

SCIO Biofeedback

- A biofeedback and bioresonance system with over 10,000 pre-loaded programs.
- Client is connected via harness.
- The SCIO sends tiny electromagnetic signatures of potential stressors or remedies (nutrients, pathogens, frequencies) into the body at high speed — up to 200 items simultaneously.
- It reads the evoked response of the body
- The software ranks which items the body “reacts” to.
- Once it knows which programs resonate, it can feed back corrective frequencies, like a mirror, to train the body into coherence.
- Because it’s interactive, it can track changes live as the session runs — seeing stress patterns resolve in real time.

SCIO – How It Works

- Scientific Consciousness interface Operations System
- Sends tiny frequency 'questions'
- Measures stress responses
- Feeds back corrective resonance

SCIO Applications

- Physical: organ function, circulation
- Nervous system: ANS, HRV balance
- Mental/emotional: trauma, NLP, brainwaves
- Beauty & performance: anti-aging, sports
- Biochemical: proteins, toxins, subtle imbalances

Sound Therapy

- The voice can be analysed through tone, frequency, harmonics
- Sound can balance emotions
- Rebecca Dawson – each cell has a tone, find your tone, the sound that resonates through your body.
- Mother earths tone is Om
- hum that tone to heal, we can hum to the earth to heal the trauma of the earth too

Full Clinic Journey Recap

- Scan (ES + NLS)
- Clear (Rife)
- Charge (Papimi)
- Entrain (Medithera)
- Tune&Integrate (SCIO)
- Tune&Integrate (Sound)
- Tune & Integrate (Acupuncture)

We are plasma

- As above so below
- We are plasma consciousness, light, as is the earth and interdimensional space crafts
- You are the plasmic field on which reality is painted, reality exists because of you
- You are not the script written on the pages, you are the plasma, everything comes through us
- In actively focusing on healing we are allowing it to return to us in our sense of awareness and allowing it to drop through the zero point, practicing sends it around in a loop, awareness is enough, bring it back through the eye of the one and begin to see the new experience

Fibonacci & Krystal Spiral

- Fibonacci = outward, expansive growth
- Krystal Spiral = inward, folding implosion
- Two complementary roles in healing
- Fibonacci = physical growth & tissue repair
- Krystal Spiral = morphic-grid entrainment image by Knew Geometry

Why Krystal Spiral

- It multiplies by $\sqrt{2}$, allowing energy to fold inward and rejoin Source
- Folds charge back on itself in perfect coherence
- Expands through 12 harmonic nodes, mirroring the activation of the 12 DNA strands in the ascending template
- Supports morphic-grid & resonance chamber design
- Complements Fibonacci for physical healing
- We need it for ascension and expansion of consciousness
- New reality, new laws, new geometry
- Source is always there, breathing in and out

Why Both Spirals Matter

- Fibonacci = of the greatest important to everything including in this case physical growth & tissue repair, Fibonacci is in everything in the 3D world and beyond (as we know)Fibonacci, as I see it can only be seen from 3d perspective as a slice of the complete picture, we have more on this to learn
- Krystal Spiral = morphic-grid entrainment, ascension, crystalline body, 12 strand DNA

Future: Resonance Chambers

- Clay chamber, natural materials, curved walls
- Copper spiral, crushed shells
- Heart coherence – hearts electromagnetic rhythm becomes ordered and harmonious, creating a stable field that allows the brain to synchronise into gamma frequencies
- Breath (and pulse) – synchronise the bodies rhythms, creating the charge coherence needed for activation
- Guided meditation to bring the man or woman into a coherent space to project their consciousness to the morphic grid and merge with the healed version of themselves

Closing Quote

Lisa Morrissey
Wellness Entrepreneur, Acupuncturist
& Vibrational Medicine Expert

- The healing is within the awareness
- Awareness creates form
- It is as it is, I see you, how fascinating, what next?
